# **6th Northeast Onsite Wastewater Treatment Short Course and Equipment Exhibition**

**THURSDAY, April 4, 2019**

<b>7:00 AM - 9:00 AM</b>	Continental Breakfast for Field Trip Attendees, Room TBD
<b>8:30 AM - 9:00 AM</b>	Pre-Field Trip Meeting, Room TBD
<b>9:00 AM - 4:00 PM</b>	<b>FIELD TRIP: 66 High Street, Guilford Commons, &amp; Westbrook Outlet facilities (Boxed Lunch Provided)</b>
<b>9:00 AM - 4:00 PM</b>	<b>66 High Street:</b> this facility was constructed in 2017-2018 at a new residential development and employs top-of-the-line membrane filtration technology. This project will be interesting to discuss because of its location at the clean-up of an industrial site. Septic and EQ tanks are installed in the groundwater, and we will discuss the measures taken to ensure that there is no infiltration. The membrane filtration tanks are above ground and the inside of the tanks can be seen. Treated wastewater is used to clean the membranes.
<b>CI-I, II, III &amp; IV [3.5 CEUs]</b>	<b>Guilford Commons:</b> a facility installed in 2016 employing a membrane filtration system, with recycling of wastewater to toilets and urinals. This project is known locally as “the rock pile” and has lateral sand filters to transmit the effluent.
	<b>Westbrook Outlet:</b> a facility installed over twenty years ago, also employing a membrane filtration system and with recycling of wastewater to toilets and urinals. We will be able to compare two very similar facilities, installed 20+ years apart, and see how the technology has evolved.
